## TextBlob: Simplified Text Processing

Release vo.16.0. (Changelog)

*TextBlob* is a Python (2 and 3) library for processing textual data. It provides a simple API for diving into common natural language processing (NLP) tasks such as part-of-speech tagging, noun phrase extraction, sentiment analysis, classification, translation, and more.

```
from textblob import TextBlob
text = '''
The titular threat of The Blob has always struck me as the ultimate movie
monster: an insatiably hungry, amoeba-like mass able to penetrate
virtually any safeguard, capable of—as a doomed doctor chillingly
describes it--"assimilating flesh on contact.
Snide comparisons to gelatin be damned, it's a concept with the most
devastating of potential consequences, not unlike the grey goo scenario
proposed by technological theorists fearful of
artificial intelligence run rampant.
blob = TextBlob(text)
                    # [('The', 'DT'), ('titular', 'JJ'),
blob.tags
                    # ('threat', 'NN'), ('of', 'IN'), ...]
                   # WordList(['titular threat', 'blob',
blob.noun_phrases
                                 'ultimate movie monster'
                    #
                                 'amoeba-like mass', ...])
for sentence in blob.sentences:
    print(sentence.sentiment.polarity)
# 0.060
```

TextBlob stands on the giant shoulders of NLTK and pattern, and plays nicely with both.

## **Features**

# -0.341

- Noun phrase extraction
- · Part-of-speech tagging
- · Sentiment analysis
- Classification (Naive Bayes, Decision Tree)
- Tokenization (splitting text into words and sentences)
- Word and phrase frequencies
- Parsing
- n-grams
- Word inflection (pluralization and singularization) and lemmatization
- · Spelling correction
- Add new models or languages through extensions
- · WordNet integration

## Get it now

```
$ pip install -U textblob
$ python -m textblob.download_corpora
```
